

Blogging in the Open about work experience

knowledge sharing, networking,
professional development

Oliver Doepner
Halifax, April 2014

About the presenter

- **Software Engineer** - Java, Linux, Open Source
- Senior Consultant, Team Lead at **CGI** since 2008
- **20+ years hands-on** software development
- Studied mathematics, linguistics, teaching
- German, in Canada since 2006
- <http://oliver.doepner.net/>

About the presentation

Theme: Interaction between knowledge sharing, networking and professional development

Blog: <http://odoepner.wordpress.com/>

“My nuggets of wisdom about coding and tweaking software”

- I explain **why** I run a public blog
- I show **how** I do it
- Then let's discuss (Q&A at the end)

This is **not** about

- ~~Tweaking visual appearance~~
- ~~Comparison of blogging platforms~~
- ~~Business models around blogging~~
- ~~The content details of my posts~~

Agenda

The beauty of public note-taking

- Blog setup, write a simple blog post
- Use categories and tags effectively
- Publish source code

Connect globally

- One-click Publicize to social networks
- Be easy to find without SEO tricks
- Encourage followers and feedback

Show and grow skills

- Blog content selection and quality
- Sharing beyond blogging
- ~~Cross-browser testing~~

The beauty of public note-taking

We take notes to remember and reflect, but

- Paper and local files have limited functionality
- Emails to self are hard to share and organize
- Cloud document services are not for quick notes
- Corporate blogging portals are for employees only

Public blogs

- are easy to share, discover and navigate
- can be organized by date or topic areas
- can use free yet powerful blogging platforms
- require almost no web design or coding skills

***Use just a web browser to write down and find
your “nuggets of wisdom” anytime, anywhere!***

Blog setup, write a simple blog post

- We go to <http://signup.wordpress.com/signup/>
- All we need is an email address
- Choose WordPress.com **Beginner**
- Choose a theme
- Create the first post

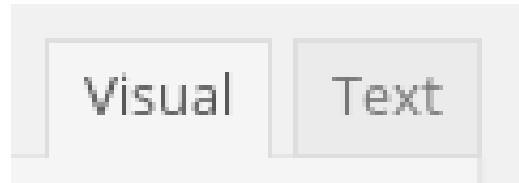

Sign up and start publishing now.

Get Started

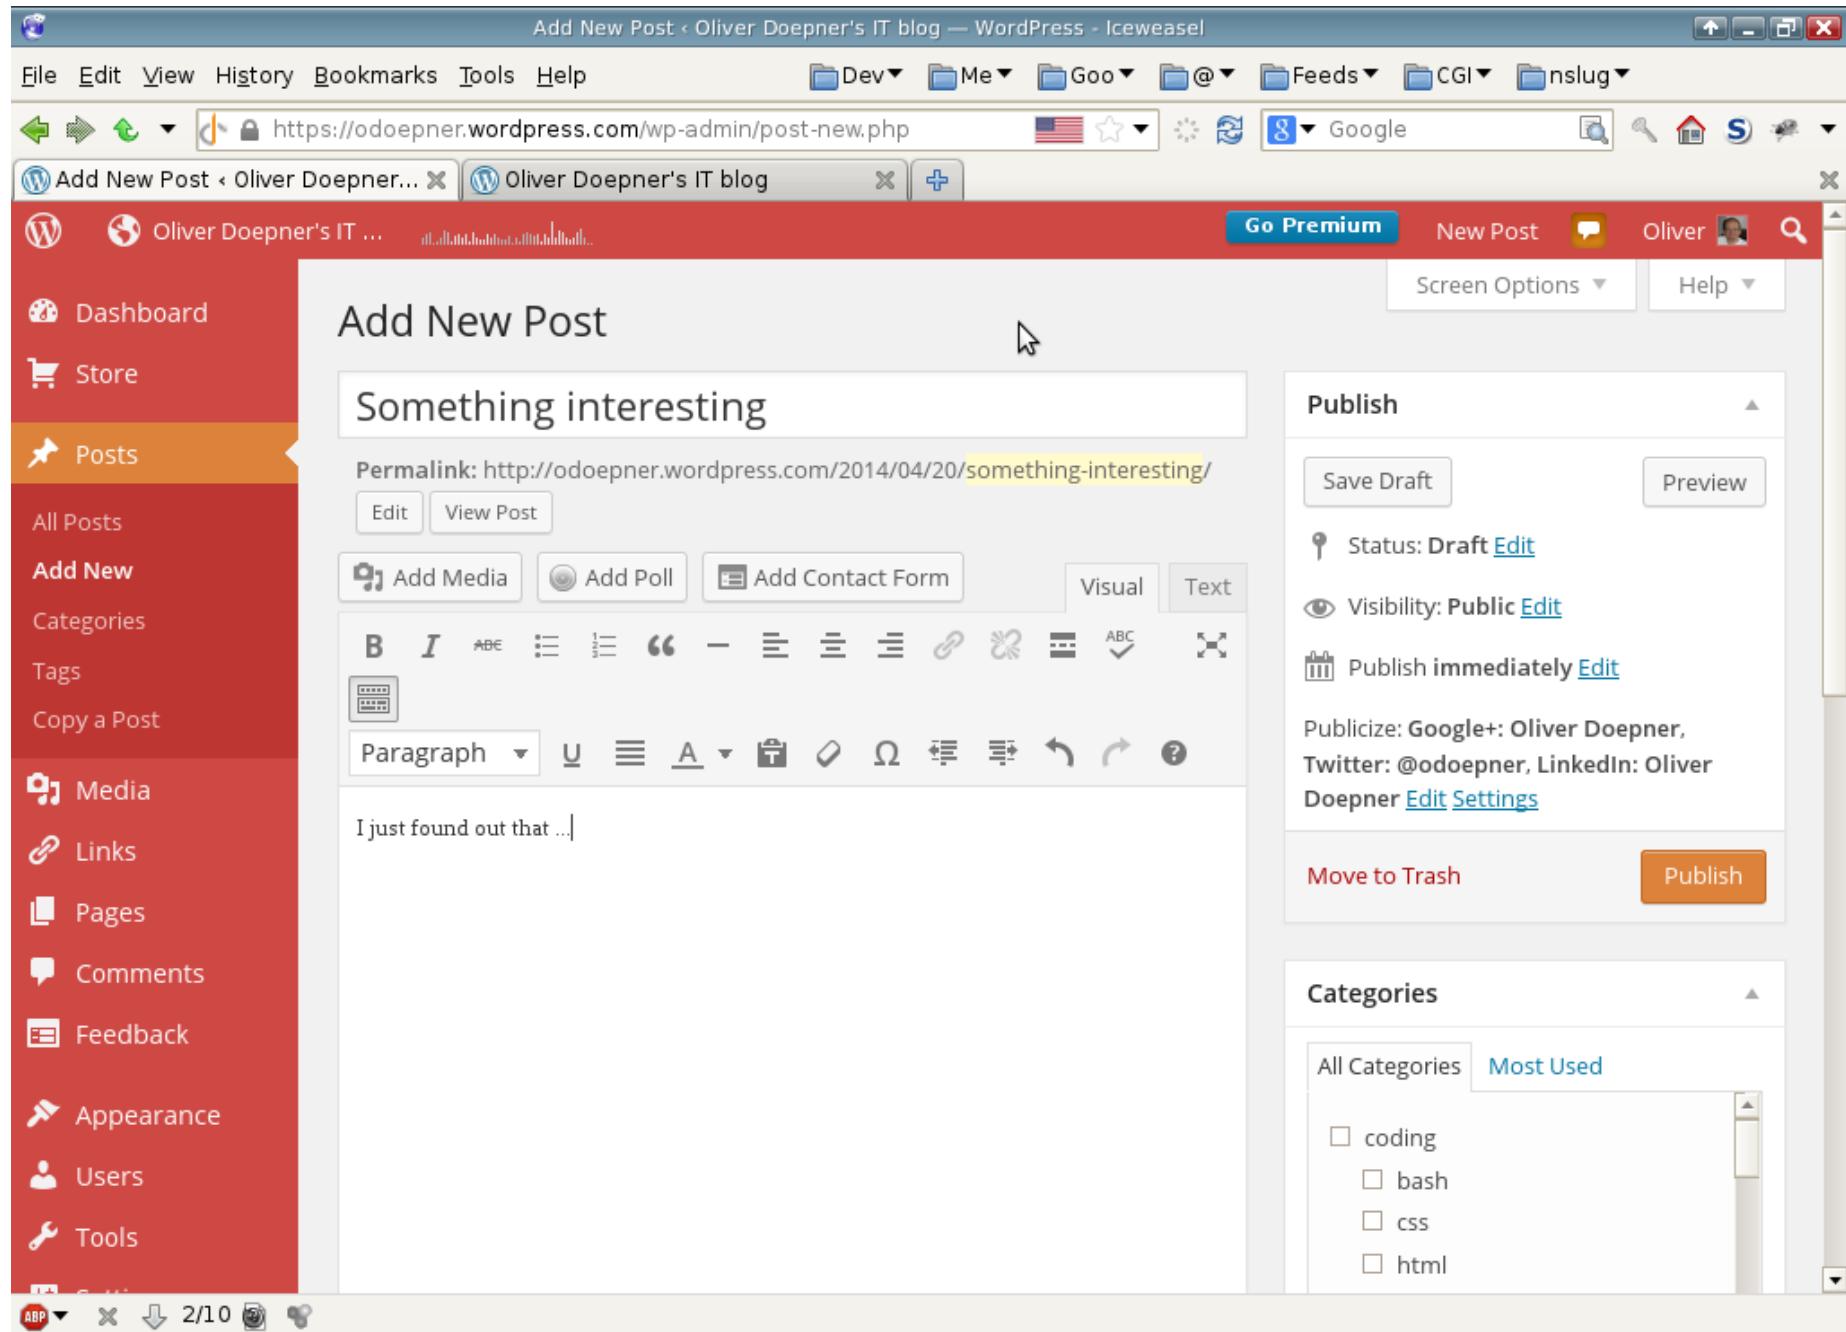

Editing modes

- “Visual” editor requires no HTML knowledge
- “Text” editor allows full control on the HTML level
- Optionally enable Markdown

Pasting rich text

- Can lead to unexpected effects
- Useful button: “Clear formatting”
- Review the cleaned up code in “Text” tab

Use categories and tags effectively

Categories for main topics of the blog

- Limited number of categories
- Just one sub-category level
- Add new categories sparingly

Navigation by category

- category cloud
- navigation menu

A category cloud visualization where words are represented as different-sized text elements. The most prominent word is 'Coding' in a large, bold, blue font. Other visible words include 'conference', 'dev-tools', 'doepner.net', 'gui', 'os', 'bash', 'css', 'cygwin', 'debian', 'eclipse', 'firefox', 'games', 'git', 'hardware', 'html', 'intellij', 'java', 'javaone', 'jenkins', 'jquery', 'linux', 'mac', 'maven', 'music', 'opinion', 'OS', 'svn', 'version control', and 'virtualbox'. The word 'xfce' is also present in a smaller size.

Use **tags** for additional ad-hoc keywords

URL patterns

- [http://myblog.wordpress.com/**category**/mycategory/](http://myblog.wordpress.com/category/mycategory/)
- [http://myblog.wordpress.com/**tag**/mytag/](http://myblog.wordpress.com/tag/mytag/)

#Blogging

On April 30th, I will give a presentation "Blogging in the Open about professional experience" at the 2014 Halifax PD summit. I will show how I use this public web log to share structured knowledge with an international community and serve as online...

Sharing Settings

Publicize

Connect your blog to popular social networking sites and automatically share new posts with your friends. You can make a connection for just yourself or for all users on your blog. Shared connections are marked with the (Shared) text.

Be easy to find without SEO tricks

- Wordpress is search-friendly out of the box, no need for SEO plugins or other tricks
- Use meaningful and precise titles and “slugs”
- Use factual and specific language, double-check terminology, link to sources
- Post links to your blog on other sites where appropriate, including sharing sites at work
- Google for links to your posts, give feedback
- Choose relevant topics and try to be useful

<http://en.blog.wordpress.com/2013/03/22/seo-on-wordpress-com/>

Publish embedded source code

Use simple markers to embed source code with syntax highlighting, preserved formatting, line numbers, etc :

```
[code language="java"]
```

```
...
```

```
[/code]
```

Example:

```
1  /**
2  * @param collection A collection
3  * @return A string listing all collection items
4  */
5  public static String toContentString(Collection<?> collection) {
6      return Arrays.toString(collection.toArray());
7 }
```

Supported languages include xml, css, html, java, c#, perl, bash, and many others

Not for large amounts of code (use a repo instead)

Encourage followers and feedback

- Enable comments, approve users once
- Approve and reply to comments quickly
- Be responsive when users ask for help
- Correct errors reported by commenters

- Use the “subscribe to blog” widget
- Provide RSS feed link
- Enable all available “Share” buttons

Share this:

Show and grow skills

Blogging can show off and grow your skills

- Fact-checks before publish often give new insights
- Linking to related sites and sources adds context
- Hopefully readers review, try and give feedback

Publicizing to networks like LinkedIn

- documents your activities and skills to professional peers and potential employers
- motivates you to produce high quality content

Using your blog as referenceable knowledge

- is a good indicator of its usefulness
- might force you to update and correct past posts

Maintain pride in your blog and it will grow with you!

Blog content selection and quality

Topic selection

- It has to interest you and ideally others
- Focus on what you know well, avoid rehashing
- Keep your blog site focused on few subject areas

How-to style

- “this is how I did it”, very concise, result-oriented
- details like code snippets are important
- assume basic knowledge, focus on hard parts
- include screenshots or even screencasts

Opinion pieces

- clearly indicate what is opinion (not fact)
- elaborate, explain, but avoid overly wordy essay style

Sharing beyond blogging

Some types of content are best shared on specialized community sites and then linked to, for example

- [Github](#) for openly developed software projects
- [Wikipedia](#) for encyclopedic reference knowledge
- [Stackoverflow](#) for coding questions/answers
- [Commandlinefu](#) for one-liner shell commands
- [JsFiddle](#) for live html / css / js examples
- [Flickr](#) or [PhotoBucket](#) for online photo albums
- [Youtube](#) for videos or screencasts
- [Slideshare](#) for presentation slides
- [Buildhive](#) for automatic builds of Github projects
- [Openshift](#) for cloud application deployment

Most of these are free and community based.
